Abstract (en)

[origin: EP0065889A1] 1. Electrolysis apparatus having a double-pole electrode, in particular for the electrolysis of saline solutions, which apparatus is constituted by a parallelepiped container (1) of insulating material enclosing double-pole electrodes removably arranged in the compartments open towards one of the faces of the container, and single-pole terminal electrodes for the passage of current, characterized in that the double-pole electrodes (8) are individually mounted to slide in said compartments (9) or in drawers (12) sliding in these compartments, the compartments (9) and the drawers (12) respectively being provided with means such as teeth (11) or grooves (13) of insulating material which receive and support the double-pole electrodes (8), the single-pole electrodes (6) being secured to the side walls of each compartment or drawer.
