Abstract (en)

[origin: US4446673A] A tap attachable to a spout of a container for decanting a liquid such as wine into bottles has a rotary valve housing and a valve body provided with a detachable handle, part of that valve body being a tubular spigot fitting into a transverse bore of the valve housing to fill a bottle aligned with that bore. The spigot, when withdrawn from the bore after removal of the tap from the spout and plugging of the latter, is receivable in an internally threaded plastic cap for forcing it into the neck of a freshly filled bottle; to unseal the bottle, a complementarily threaded extremity of the handle detached from the valve body is screwed into the cap for extracting same.
