Abstract (en)
[origin: EP0065995A1] In a water-cooled heat-accumulating type drink cooling system having a water tank (92) filled with water (91) and provided with a cooler (94) and a drink cooling coil (31) immersed in the water and an electric water agitator (95, 97) for cooling a drink flowing through said drink cooling coil (31), an agitator stopping means is provided, which stops said agitator (95, 97), when the temperature of the water (91) in said water tank (92) is decreased to a level in the neighbourhood of its freezing point. Hereby freezing of the drink within the drink cooling coil (31) may be prevented.
