Abstract (en)

[origin: EP0066140A1] 1. Attachment claw, especially for an inset sink, with an insert member (3) having a claw member (4) connected thereto, wherein the insert member (3) includes at least one groove (7) for receiving a rail (8) together with at least one cam (10) for engaging in an aperture (13) in the rail and retaining said rail in place, characterised in that in order to push the rail (8) into the groove (7) and shift or remove the claw (4), the cam (10) is pivotable out of the insertion plane (14) and after the rail has been pushed into its retention position is reversely pivotable, or vice versa.
