Abstract (en)

[origin: EP0066928A1] 1. A method of operating an X-ray system comprising an X-ray generator for a plurality of X-ray tubes, a device for adjusting a stand-by filament current for a filament of an X-ray tube during intervals between exposure, and a high voltage generator, characterized in that there are stored a plurality of stand-by filament current values which are associated with different X-ray tube filaments (4, 4', 5, 5', 6, 6'), the stand-by filament current value associated with an X-ray tube (for example, 6) which is connected to the high-voltage generator being addressed and adjusted for the relevant filament.
