Abstract (en)
[origin: WO8201896A1] A sliding member made with amorphous metallic material on the sliding surface. The sliding member has a small coefficient of friction with magnetic tape by constructing the member in this manner together with high hardness. Accordingly, it can prevent magnetic tape from adhering to the member and thus has excellent running characteristic.

Abstract (fr)
Un organe coulissant est fabriqué avec un matériau métallique amorphe sur la surface coulissante. L'organe coulissant possède un petit coefficient de frottement avec une bande magnétique en construisant ensemble l'organe de coulissement avec une grande dureté. En conséquence, on peut empêcher la bande magnétique d'adhérer à l'organe, lui donnant ainsi une excellente caractéristique de fonctionnement.
