Abstract (en)
[origin: EP0068304A2] 1. Process for heating coke ovens with the aid of circulating flows in the heating flues, characterised in that the intensity of the circulating flows in the heating flues is designed to vary, continuously or discontinuously, from the machine side to the coke side of the ovens, by means of structural designing the sizes of the circulating-flow cross-sections and/or of the reversing-point cross-sections between the heating flues to which upward-flowing gas is admitted and the flues to which downward-flowing gas is admitted.
