Abstract (en)

[origin: EP0068351A1] The invention relates to a method of dyeing a torn fiber bundle, and an apparatus implementing the method. The method is characterized in that the bundle of synthetic fibers, after being torn and packed in an autoclave to a packed doughnut shape is directly immersed in a dye tank, wherein it undergoes the action of a bath flowing through the doughnut in a radial direction. Thus, containers and related apparatus may be used having larger diameters than conventional approaches.
