Abstract (en)
[origin: EP0068576A1] The invention concerns a container, more particularly a crate made from a single plastic moulded body having upright side walls 1 and portions enclosing said side walls which a.o. consist of a reinforced upper edge 2, reinforced corner columns 3 and a bottom 4 provided with openings. As a.o. the portions enclosing the side walls are in the form of case-shaped profile parts which are open towards the underside of the box, a crate can be produced in a very light construction from a relatively thin material, by injection-moulding.
