Abstract (en)
An invalid chair comprising a back section, a seat section, and a frame which supports the back and seat sections. The back section is pivotable relative to the frame about an axis located above the level of the seat section, the back section being pivotable between an upright position and a lowered position, and the seat section is connected to the back section by a linkage which causes the seat section to move upwards and forwards as the back section is pivoted towards the lowered position. Thus the configuration of the chair can be altered to that of a couch when the chair is occupied.
