Abstract (en)

[origin: EP0069653A1] 1. Device for mounting an information panel on a support, comprising an arm (1) fitted with respective means for fixing on the support and on the panel, this arm being constituted by two shells (2a, 2b) each having an internat face provided with a recess (7a, 7b), the two recesses being in oppositely-facing relation in order to constitute in the closed position of the arm (1) a cavity for passing a substantially cylindrical support (22) such as a post, locking means (3a, 3b) being provided for maintaining the two shells in the closed position, and fastening means (28) being provided on the arm for fixing a panel (32) thereon, characterized in that it comprises locking means (12, 19) which are separate from the locking means carried by the arm and so arranged as to bear on the support.
