Abstract (en)
[origin: EP0070996A2] The suspended package has a container, consisting of a receiving trough and a closure lid, which is fitted with a suspension tab with a suspension slot. In order to allow effective presentation with simple handling and a simple technical construction and to ensure that the package can be closed again in a simple manner after the first and possibly subsequent further opening operations, the opening of the receiving trough (1) is closed by a tear-off film (4) which is located between the closure lid (7) and the receiving trough (1) and is connected to the opening edge (3) of said receiving trough. <IMAGE>
