Abstract (en)

[origin: EP0071187A2] 1. Holding device for vertically arranged shuttering boards (3) in cases of floor concreting or the like, consisting of a holding bracket (4) with a horizontally aligned support flange (5), an inner wall flange (7) adjoining the support flange (5) at right angles and held against the masonry, and a shuttering board flange (6) adjoining at right angles at the other end of the support flange (5), characterized in that the holding bracket (4) is designed in one piece and "Z"-shaped such that the support flange (5) corresponds to the width of the masonry, the wall flange (7) is directed downward and lies against the inside of the masonry and the outside of the shuttering board flange (6) is flush with the outside of the masonry and is directed upward, a predetermined breaking line (8) being provided in the joining area between the support flange (5) and the wall flange (7).
