Abstract (en)
[origin: EP0071201A1] 1. A coupling device for a plurality of movable platforms for parking motor vehicles, where one platform (11) at the end of a row of platforms is provided with a drive arranged to couple the row together and then to form a gap between two adjacent platforms, said device having contacts (3, 4) and couplings between the platforms, where the coupling links (1, 2) and the contacts (3, 4) of each side of the platform are joined into one structural unit (5, 6) characterised in that a peg-like coupling link (1) is provided which is encircled by a contact carrier (7).
