Abstract (en)

[origin: EP0071376A1] A scaffold fitting for anchoring a scaffold tube to a wall has a bolt (2, 31) which can be secured into the wall and a gripping device (3, 20) which is connected to the bolt and can be clamped around the scaffold tube (19a, 28). The gripping device can be adjusted, for example, rotated, around the bolt. The gripping device may be formed from pivotably interconnected jaws (7, 12 or 21, 22) which can be fixed together with a clamping screw (13, 24). In one embodiment the scaffold tube (19a) is at right angles to the bolt (2) and can be clamped onto the bolt to prevent further relative movement. In an alternative embodiment the tube (28) is parallel spaced and laterally offset relative to the bolt (31).
