Abstract (en)

[origin: US4656009A] The invention relates to a reaction support incorporating multiple recipients for testing liquid doses, comprising a transparent plate provided with a plurality of recesses of which each forms one of the recipient. According to the invention, this support is characterized in that the plate is in the form of a disc and in that the recesses are obturated at the top and are each in communication with the outside via an eccentric orifice opening on the upper face of the disc. The invention is particularly applicable in the domain of biology.

Abstract (fr)

Support de réaction à récipients multiples pour tests de doses de liquides, comportant une plaque transparente pourvue d'une pluralité d'alvéoles dont chacun d'eux forme l'un desdits récipients. Selon l'invention, ce support est caractérisé en ce que ladite plaque présente la forme d'un disque et en ce que les alvéoles (11) sont obturés vers le haut sont chacun en communication avec l'extérieur par l'intermédiaire d'un orifice excentré (5) débouchant sur la face supérieure du disque. Biologie.
