Abstract (en)  
[origin: US4475743A] A heel holder for a ski binding includes a guide rail, a base plate movably supported on the guide rail, and an abutment which can be releasably secured to the guide rail. A thrust spring urges the base plate forwardly relative to the abutment. A sole holder and spring housing are pivotally supported on the base plate, the sole holder pivotally supporting a pawl and the spring housing supporting a release spring which biases the pawl against a control surface provided on the base plate. An upwardly projecting control part provided on the abutment, when the thrust spring moves the base plate forwardly with the sole holder in a closed position, cooperates with a cam provided on the spring housing and pivots the spring housing, thereby interrupting the force exerted by the release spring on the pawl so that a spring cooperable with the sole holder can move it into an open position.
