Abstract (en)
[origin: US4485504A] A device for carrying sick persons comprises a frame formed as a longeron and covered with a pad, and a safety belt system connected to the frame. The belt system includes a V-shaped portion which is to be extended over the shoulders of a patient and a belt loop to be extended over the legs of the patient. The two portions of the belt system may be connected to each other by a snap closure. The device is further provided with an unrolling arrangement for adjusting the length of the belt loop.
