Abstract (en)

[origin: EP0073332A2] 1. Protective material for bitumen coatings or the like consisting of a thin and substantially rigid synthetic foil in which longitudinal outwardly curved members, produced by deep-drawing methods in particular, are disposed periodically over the surface, characterised in that a first portion of these longitudinal outwardly curved members (21) is disposed in one direction and in that another second portion of the curved members (22) is disposed in a direction extending transverse thereto, and in that the adjacent curved members (21 and 22) belonging to one portion of the curved members are divided by a respective transversely extending curved member (22 or 21) of the other portion of the curved members and vice versa.
