Abstract (en)

[origin: EP0073336A1] 1. Machine for the production of welded wire gratings from longitudinal and transverse wires (2, 3) intersecting each other at right angles with a multiple spot welding apparatus (1) and with a device for the stepwise movement of the wire grating in accordance with the transverse wire spacing by means of conveying rollers (4, 5) which rotate in opposite directions to one another and which clamp the longitudinal wires (2) between themselves and which are adapted to be driven intermittently in accordance with the spacing of the transverse wires, characterised in that the conveying rollers (4, 5) are situated before the welding apparatus as viewed in the direction of feed of the longitudinal wires (2).
