Abstract (en)
[origin: EP0073749A2] 1. A container for small parts, in which storage containers disposed one over the other are detachably secured to a central retaining rod and are provided with centring means for determining the relative position of said storage containers, wherein the upper most storage container is adapted to be closed by a cover, which is adapted to be slidably fitted on the central retaining rod, characterized in that the cover (3) is rotatable about the central retaining rod (6) relative to the uppermost storage container (2) and has a filling opening (3e), which is adapted to receive the neck (4c) of a funnel (4), which is provided with means for detachably connecting the funnel to the central retaining rod (6), the storage containers (1, 2) are provided with means for fixing them in different angular positions, and, if desired, the container is adapted to be closed by the funnel (4) in an inverted position.
