Abstract (en)
[origin: EP0074635A2] The device especially for flowers, plants, bulb, tubers or the like essentially consists of at least one element (1) into which at least one container (3) can be inserted which has a hollow space for receiving the ornamental articles. Said element (1) has at least one indentation (2) which is symmetrically stepped, and into which the container (3) can be inserted. Individual steps (4, 5) of this indentation can be separated so that the element (1) contains an opening in its indentation (2), by means of which the container (3), which has projections (16) on its outside wall on the horizontal resting surfaces (4) of the indentation (12), can hang in the element (1). Depending on the diameter of the container (3), a varying number of steps (4, 5) can be separated from the element (1). <IMAGE>
