Abstract (en)
[origin: EP0074684A2] The invention relates to a shaving apparatus comprising an external cutting member 3 having a shaving portion 5 formed with hair-entry apertures 4 and an internal cutting member 6 which is rotatable relative to the external cutting member and which comprises cutting elements 8 which extend in an axial direction towards the shaving portion. The internal and external cutting members comprise separate corresponding bearing portions 24, 25; 29, 32; 33, 34, 36; 41, 42 for rotationally supporting the two cutting members 3, 6 relative to each other in the axial direction.
