Abstract (en)

The rack comprises a main frame (11, 12, 13, 14), two leg members (26,27), and an article draining platform ("A"), said main frame, said leg members, and said article draining platform being inter-connected whereby, in a folded or inoperative position for the rack, said main frame, said leg members, and said platform lie in adjacent substantially parallel planes and, in an operative position for the rack, when the main frame lies in a substantially vertical plane, the leg members are outstanding from one major face of the main frame adjacent the side edge regions of the said main frame and the article draining platform is supported in a substantially horizontal plane between said main frame and said leg members. The rack thus forms a stable support for the articles to be dried, but is of simple structure and readily folds.
