Abstract (en)  
[origin: US4546547A] A checking and aligning stand for measuring and aligning structure sections of the strand guide of a continuous casting plant includes measuring surfaces to determine the mounting position of the structure section. In order to be able to effect a quick check of the mounting position of curved structure sections of a bow-type continuous casting plant without impeding the casting operation during this adjustment work, at least two pairs of measuring surfaces arranged at an angle to each other, preferably at 90 DEG , to determine the roller-way coordinates relative to the position-defining supporting surfaces of the structure section are provided on the checking stand.
