Abstract (en)

[origin: EP0075970A1] 1. Gun with an ammunition container (4) and a reloading container (10) displaceable from an initial position into a reloading position, and with a device (203) located in the reloading container (10) and intended for ejecting magazine clips (5) filled with sets of cartridges from the reloading container (10) into the ammunition container (4), characterised by a sensor (20) which is displaceable relative to the device (203) for ejecting the magazine clips (5) and can be introduced into the ammunition container, and which can be supported on the last magazine clip (5) located in the ammunition container (4), and by which a device (205) for interrupting the magazine-clip ejection can be actuated.
