Abstract (en)

An anchorage joint (20) to secure a timber frame of a building to a concrete foundation (15) comprises a bar (21) adapted to have one end (22) embedded within the foundation (15). A sleeve (25) encompasses the exposed end of the bar (21), the sleeve being adapted to be fixed to a timber member (13) of a timber frame and engaged by the bar (21) to thereby secure the member (13), and therefore the frame, to the foundation (15).
