Abstract (en)  
[origin: US4488381A] At a cutter apparatus for producing surfaces of a cutter head at a hardened steel cutter blade there is provided for monitoring the wear and for its rapid compensation a mounting or support device for a material-removal or cutting grinding disk and a power take-off wheel which is axially displaceable with respect to a pivot axis. Additionally, the width of the power take-off wheel is greater, by the amount of an adjustment path for the cutting grinding disk, than the width of a drive belt for the power take-off wheel. Furthermore, there is provided a reference surface for adjusting a movement plane of the cutter grinding disk in a desired cutting plane.
