Abstract (en)
[origin: EP0076908A1] 1. Apparatus for the strapping or articles, especially packages (11), with a U-shaped band guide frame (12) in which a hooping or strapping band (14) is guided with its free end leading about the article to be strapped, and which at its inner sides comprises sliding surfaces (38) for the strapping band and at its open side is closed by a movable cross-member (22), which cross-member also comprises at its inner side a sliding surface (37) for the band and is adjustable on the free frame legs (19) in the longitudinal direction thereof, characterised in that the sliding surface (38) of the frame leg (19) from which the free end of the strapping band (14) passes on to the sliding surface (37) of the movable cross-member (22) comprises grooves (45) extending in the longitudinal direction of the frame legs (19), and that the sliding surface (37) of the cross-member (22) is provided with projecting sliding surface portions (46) which engage into the grooves (45) of the sliding surface (38) of the frame leg (19).
