Abstract (en)

A boat for recovery of floating materials comprises a first separation means [1, 3, 4, 5] for separating liquids and a second separation means [2, 9] for separating solid matter. Preferably, the first separation means includes a settling chamber having partitions into which chamber liquid is driven by pump [3] from an inlet [1]. The second separation means [2,9] is preferably normally located in front of inlet [1] and is pivotable to a raised position for emptying thereof.
