Abstract (en)

A fluid dispenser, particularly for hand-washing detergent, has a flexible container (19) with means (11, 12) associated therewith for squeezing the container (19); an outlet means (4), attached to the container (19); and an electrically operated valve mechanism (15, 16, 17) associated with the outlet means (4) which is triggered by a detector means (6, 7) in close association with the outlet means (4) and which operates the valve mechanism (15, 16, 17) for a time interval when an object passes beneath the detector.
