Abstract (en)

[origin: EP0078466A2] The profile parts (8) of the supporting frame (3) have a cavity end wall (9), a cavity base wall (10), a receiving groove (11) for the surrounding wall elements (5.1, 5.2) and a resting surface (13) for the shelf board (7). Adjacent frame components (3.1-3.4) are connected non-positively to one another by means of corner tabs engaging in the cavity (15) of the base wall (10). Serving for fixing the surrounding wall elements (5.1, 5.2) to the frame components (3.1-3.4) are clamping members (6) which are mounted swivellably in said frame components and have an elastically resilient clamping tongue. The shelf/supporting frame can be built from standardised parts according to the modular concept and it has great resistance to twisting due to the cavity profile portions of the end wall and the base wall. <IMAGE>
