Abstract (en)

[origin: EP0079270A1] 1. Multi-size branch circuit breaker inserted downstreams of an energy counter (12) in an alternating distribution network for the supply of an electrical low-voltage installation of a subscriber, the size changing of the circuit breaker (10) being remotely controlled by the official agent from the housing (14) of the counter (12) by means of a connection circuit (40) with guide wires (42, 44) arranged between the housing (14) and the circuit breaker (10), characterized by the fact that the connection circuit (40) is connected electrically with a branch terminal (46) disposed inside the housing (14) and intended for the temporary connection by the agent of a portable control generator (G) able to emit through said circuit (40) a size changing signal to a control switch (38) associated to the release assembly (28) of circuit breaker (10).
