Abstract (en)
[origin: ES268505U] The cylinder (1) comprises in the enlarged portion of its head (2) a closure flap (4) which is pivotably mounted and closes the inlet opening of the lock channel. The end (8) of a torsion spring (7) bears against the face of the flap (4) located on the channel side of the lock. The other end (12) of the torsion spring (7) extends beyond, before assembly, the outer face of the cylinder through a slot (13) arranged in the head (2) of the cylinder (1) after assembly, it is bent to cooperate with a stop (14) which is integral with the cylinder (1). Said arrangement of the cylinder facilitates its assembly.
