Abstract (en)

[origin: EP0079570A2] 1. Regulating apparatus for the charging air of internal combustion engines, comprising an intake mass throughput meter (5), an exhaust gas sensor (6) and a regulator which, with the signals of the mass throughput meter (5) and of the exhaust gas sensor (6), variably regulates the fuel throughput in accordance with the working conditions in each case, characterised in that the exhaust gas sensor is an exhaust gas mass throughput meter and the fuel mass is determined, by means of an electronic regulator, from the difference of the intake air throughput and the exhaust gas mass throughput.
