Abstract (en)
    [origin: EP0079571A2] 1. Tachograph having a housing (5) and a lid (3) pivotally adapted thereto, and giving access to the recording means (26),
    at the front side of which lid through a window there are indicating means (10 to 13) at least for the speed to be observed and having a distance
    counter (25) arranged independently of the lid (3) and a cover (6) attributed to the distance counter releasably connected to the housing by means
    of sealed screws the front side of which cover is essentially in the plane of the front face of the lid (3) so that the front side of the lid (3) and the front
    side of the distance counter cover (6) form the front face of the tachograph, which front cover (6) has openings for setting means (21) to penetrate
    it by means of which the various recording kinds attributed to the divers driving activities may be manually selected, characterized in that the cover
    (6) is connected to the housing (5) by hollow screws (19) to be actuated from the front side, that the hollow screws (19) serve as mounting means
    for the setting shafts (21) to transmit the setting movements, in that the setting knobs (16, 17) which are attributed to the setting shafts (21) are
    essentially unreleasabe and invisibly cover the hollow screws (19) and in that the setting shafts (21) are axially secured in the interior of the housing.
