Abstract (en)

[origin: WO8204269A1] The device comprises a pair of delivery rolls (1) followed by a hollow shaft (2) provided with an attaching yarn bobbin, a pair of detaching cylinders (3) as well as a take-up device (4). Between the pair of supply cylinders (1) and the hollow shaft (2) there is arranged a casing wherein a main channel, as well as a fiber sucking channel and a yarn sucking channel are located. Further, in the casing there is arranged a movable tube for interrupting the effect of the fiber sucking channel. Said tube may be arranged transversally to the main channel and movable about its longitudinal axis or arranged in the direction of the main channel axis and movable about its longitudinal axis or displaceable in the longitudinal direction.
