Abstract (en)
[origin: EP0079983A1] 1. Apparatus for mixing and spraying a mixture consisting of at least two components, for example liquids, and a propellant gas, comprising two containers (1, 7) arranged one within the other for receiving the components to be mixed and the propellant gas, and a discharge valve (2) arranged on the outer container (1) for acting by way of an actuating element (12) on a parting zone (10) of the inner container (7) made of glass, ceramic or like corrosion-resistant material, characterised in that the parting zone (10) is connected to a neck-like extension (11 or 20) with which the actuating element (12) of the discharge valve (2) is operatively connected in such a way that by tilting or pivoting the discharge valve (2) via the neck-like extension (11 or 20) a sufficiently large parting moment can be exerted on the parting zone (10).
