Abstract (en)  
[origin: EP0080202A2] The hinge has a baseplate (1) with a first indentation on an outer surface so that a depressed surface is produced for the accommodation and for the sliding of the visor (21) and the edge of which has a raised profile (7), the baseplate (1) having a second indentation on the inside so that an indentation is produced which is opposite the first indentation and has two continuous elongated openings (9, 10) for the sliding guiding of a triangular guide element (11), one of the corners of the guide element (11) being connected to an end portion of the visor (21), a second corner being connected by means of elastic elements (16) to a fixed point on the baseplate (1), and a third corner of the guide element forming a guide pin (13) which is guided along the second opening (9). <IMAGE>
