Abstract (en)
[origin: US4506780A] A textile machine is provided with a movable transport conveyor having Casablanca pins which convey packages on bobbins and a support member located in the path of movement of the bobbins for release of the bobbins from the pins. The support member serves to push the bobbins relative to the pins in order to effect a release of the bobbins from the pins. In addition, the support member cooperates with a transport conveyor which permits the released packages to be taken off to further processing equipment.
