Abstract (en)

[origin: EP0080685A1] 1. A method of applying liquid foamed or pasty media to webs of loop pile or the like, the medium which it is required to apply being applied by means of at least one rotating stencil or the like to the web passing through below the stencil, the speed of rotation thereof and the speed of the web differing from one another, characterized in that the speed of rotation of the stencil is from 0.3 to 6 % greater or from 0.3 to 6 % less than the speed of the moving web and, in the event of the pile being at an inclination opposite to the direction of web movement, the lower stencil speed value is set up whereas in the event of the pile being disposed at an inclination in the direction of web movement the higher stencil speed value is set up.
