Abstract (en)
[origin: EP0080703A2] In a tubular screen (10) for electric fluorescent tubes (14) having an opening extending in the longitudinal direction, the screen (10) is formed by longitudinal screen profiles (11) which are arranged at a distance from one another with the formation of two opposite through openings (12, 13) for the light beams. Fastened detachably on the inside of both longitudinal screen profiles (11) in each case is an angular reflector strip (16), whose angular edges (16a) are situated opposite one another, so that the limbs of the reflector strips (16) in each case form a reflector opening outwards. <IMAGE>
