Abstract (en)
[origin: CA1176012A] . A novel hinge is disclosed, in which at least two flexible strips are articulated, each via two articulation grooves, to two parts which are movable relative to one another and are substantially cylindrical in shape. The arrangement is such that, upon a relative movement of the two parts with respect to one another out of one stable position into the other stable position, the flexible strips are located in a substantially radial plane of the two parts.

Abstract (de)
Es wird eine neue Scharniergelenkanordnung angegeben, bei der mindestens zwei Federstreifen (1 bis 3) jeweils über zwei Gelenkrillen (7, 8) an zwei relativ zueinander beweglichen und im wesentlichen zylindrisch ausgebildeten Teilen (5, 6) derart angelenkt sind, daß sie sich bei einer Relativbewegung der beiden Teile zueinander aus einer stabilen Stellung in die jeweils andere stabile Stellung in der Totpunktlage in einer im wesentlichen radialen Ebene der beiden Teile befinden.
