Abstract (en)

[origin: US4432753A] The invention discloses a multi-shot artificial insemination device and interchangeable and disposable reservoir tubes connectable thereto such that plural doses of liquid semen are sequentially discharged from one end of a tube by step-wise displacement of a plunger into another end of the tube. The apparatus is configured for easy, secure connection and support of a rear end of a reservoir tube to the device while a freely protruding front end of the reservoir is of sufficient length and shape for insertion into an animals cloaca for insemination thereof upon actuation of the device.
