Abstract (en)

[origin: US4690467A] A security housing for storing and preventing the theft of elongated objects such as a windsurfer and its accessories is provided. The housing includes at least one compartment that is partially open at the top so that a portion of the windsurfer passes therethrough. The compartment has two vertical walls in intersecting planes, and a door and a lock that are controlled by a coin-operated apparatus. The windsurfer and its accessories are prevented from being removed by: a top wall having an oblong opening whose length is less than the width of an accessory, such as a wishbone; a ring attached to one vertical wall that holds an accessory, such as a wishbone, in the compartment; and a tie that is extended transversely across the keel shaft of the windsurfer to hold the windsurfer in the compartment. The compartment may be in the shape of a trapezoid or a triangle in cross-section. A plurality of compartments may be attached adjacent to one another in either a linear or circular configuration. In its linear configuration, adjacent compartments are inverted with respect to one another so that the front of one compartment is on the opposite side of the housing from adjacent compartments.

Abstract (fr)

Une enceinte de sécurité comporte un ou plusieurs compartiments verticaux (1) destinés à recevoir et à protéger du vol un dispositif longiligne en un ou plusieurs éléments de longueur variable, tels que par exemple une planche à voile, son mât et sa wishbone et sa ou ses voiles. Chaque compartiment est doté d'une porte (2) avec serrure de sûreté commandée ou non par un dispositif monnayeur, chaque compartiment est ouvert à son sommet transversalement à son axe pour permettre le passage de la portion des éléments longilignes de longueur supérieure à la hauteur du dit compartiment qui est doté de moyens de blocage en position des éléments et dont le fond (14) est ajouré pour permettre l'écoulement des eaux.
