Abstract (en)
[origin: WO8204383A1] A portable, openable and collapsible lodging space, which consists of a folding top portion comprising two gable walls (6), two side walls (7), and two roof slopes (8) placed in an inclined position when opened, as well as possibly of a frame portion supporting the folding top and consisting of support bars, said frame portion including support bars (10) at the connection points between the side walls and the gable walls as well as, as extensions of the said support bars (10), support bars (11) at the connection points between the roof slopes (8) and the gable walls (6). When collapsed, the lodging space is folded into a transport case consisting of two halves (1) connected to each other by means of hinges, which case, when opened, can be used as the bottom of the lodging space. The side walls (7) and the roof slopes (8) together with support bars (10, 11), if any, are, when the lodging space is folded together, folded towards the middle part of the lodging space at the connection point (19) between the side walls (7) and the roof slopes (8). Thereby the inside faces of the side walls (7) are turned towards the inside faces of the transport case halves (1), and the inside faces of the roof slopes (8) turn towards one another.

Abstract (fr)
Un abri portatif, ouvrant et repliable se compose d'une partie superieure pliable comprenant deux parois de pignons (6), deux parois laterales (7) et deux pans de toiture (8) places dans une position inclinee a l'ouverture, ainsi qu'eventuellement une partie de chassis supportant le sommet pliable et se composant de barres de support, cette partie de chassis comprenant des barres de support (10) aux points de liaison entre les parois laterales et les parois de pignons ainsi que des barres de support (11) faisant l'office de prolongement des barres de support (10) aux points de liaison entre les pans de toiture (8) et les parois de pignons (6). Dans sa position repliee, l'abri est plie a l'interieur d'un conteneur de transport compose de deux moities (1) reliees par des charnieres, ce conteneur pouvant etre utilise en tant que fond de l'abri quand celui-ci est ouvert. Les parois laterales (7) et les pans de toiture (8) ainsi que les eventuelles barres de support (10, 11), sont plies en direction de la partie mediane de l'abri au point de liaison (19) entre les parois laterales (7) et les pans de toiture (8), lorsque l'abri est replie. Les faces interieures des parois laterales (7) sont ainsi tournees vers les faces interieures des moities du conteneur de transport (1), et les faces interieures des pans de toiture (8) se rabattent l'une contre l'autre.
