Abstract (en)
[origin: EP0081765A2] 1. Anti-theft security apparatus for motor vehicles, having a first transmitter for the wire-less and contact-less transmission of a code signal to a receiver situated in or on the vehicle which renders use of the motor vehicle possible in the case of conformity of the code signal with a stored code signal characterised by a second transmitter for a second signal of like nature, the orientation of which is differently selected from that of the transmitter (8) for the code signal (I) in such a way that, if the code signal transmitter (8) is orientated to the receiver (2), the second signal arrives only considerably attenuated or not at all at the receiver (2).
