Abstract (en)

A soap bubble rush producing device to create scenographies in which a central quadrilateral envelope (2) is surrounded by a square tank (1) filled with a soap solution. A pair of orthogonal shafts (13, 15) with bubble dipping elements (18) on each end are rotated in the square tank to form soap solution films in the rings (19). Air which has been drawn in by a fan (4) through an opening (5) at the top of the envelope passes through holes (20) in the envelope at a height corresponding to the top of the path of the dipper. The fan and shafts are driven by an electric motor (10), and the whole device can be rotated on a pivot (23).
