Abstract (en)

[origin: EP0082453A1] 1. Process for the anodic treatment of a material in the form of a sheet, a foil, or a web of aluminum or an alloy thereof, in an electrolyte comprising at least one polymeric polybasic organic phosphonic acid, sulfonic acid, or carboxylic acid, if appropriate, after a preceding mechanical, chemical and/or electrochemical graining treatment, wherein the electrolyte in a non-aqueous form contains at least one organic solvent having a dipole moment of at least 1.5 Debye.
