Abstract (en)

An elongated component for use in the construction of a window or door frame in which one external face of the component (5) is provided with at least two longitudinally extending channels (13) incorporating retaining means (14) enabling fittings to be attached to the component. Preferably the surface of the component opposite to that in which the grooves or channels are formed incorporates inwardly directed formations (9, 9A) adapted to locate a glazing element (10). The external or outer face may incorporate a central longitudinal groove or channel (12) disposed between a pair of peripheral channels (13). Preferably the central groove or channel is of greater width and greater depth than said peripheral channels.
